

There is a new educational tool called OSMO being piloted by Armstrong first grade teachers. OSMO connects to a standard iPad and becomes a virtual tool to allow students to interact with the physical world instead of just the screen while learning. It has four educational games that tailor themselves to the abilities of the students using them, allowing for appropriate individualized learning for each and every child who touches it. First grade is an essential time in a child's education especially in learning to read, write, spell and understand math concepts. The OSMO Kit allows children to work individually or in teams, in competition and collaboration. It focuses on spelling, basic math, shapes and geometric spatial reasoning. To learn more about OSMO you can visit their website.
